

Medeco Removable Cam Locks

medeco[®]
HIGH SECURITY LOCKS

All Medeco cam locks are protected by hardened steel anti-drill pins at critical points and incorporate Medeco's patented, double locking principle which renders the lock virtually pickproof.

The Removable Core cam lock is designed so that the inner lock core can be removed from the shell. This allows for the cores to be changed out by the end user with a "Change Key". Once the core is removed with the change key a new core can be inserted into the shell.

Available in either the Biaxial keyway or the new patented M3 keyway.
