

Tamper Proof Key Rings

Tamper-Proof Key Rings prevent substitution and unauthorized removal of keys. The serial number on each Tamper-Proof Key Ring restricts interchanging.

No one can remove your keys without detection, and once the seal is destroyed it cannot be resealed. Our system eliminates the costly and unsafe use of welding. Welded bonds can be broken and resealed without detection and make a ring brittle.

Our 4mm stainless steel rings are uniquely formed with strict tolerances to ensure quality. The smooth seal allows keys to move freely around the ring without an interfering bump.

Available in both rigid and flexible models.

Solid Ring	Size	Flexible Ring	Size
KS45080	1"-Solid	KS45085	1" Flexible
KS45050	1 5/8" Solid	KS45087	1 5/8" Flexible
KS45060	2" Solid	KS45089	2" Flexible
KS45070	3" Solid	KS45090	3" Flexible
KS45072	4" Solid	KS45092	4" Flexible
