

Tamper Proof Key Rings

Tamper-Proof Key Rings prevent substitution and unauthorized removal of keys. The serial number on each Tamper-Proof Key Ring restricts interchanging. Save time with portable tools that can be taken to the job site.

No one can remove your keys without detection, and once the seal is destroyed it cannot be resealed. Our system eliminates the costly and unsafe use of welding. Welded bonds can be broken and resealed without detection and make a ring brittle.

Our 4mm stainless steel rings are uniquely formed with strict tolerances to ensure quality. The smooth seal allows keys to move freely around the ring without an interfering bump.

LSI Part No.	Diameter	Material
45050	1 5/8"	Stainless Steel
45060	2"	Stainless Steel
45070	3"	Stainless Steel
45075	4"	Stainless Steel
