January 12, 2009

Locking Systems International releases new Padlock Line featuring the “Universal Puck”

Locking Systems International has released a new line of solid steel padlocks. The new Universal Puck padlock gives the user the ability to change the lock cylinder themselves. The 8100 and 8200 series padlocks provide higher security in a solid steel package using the industry standard lock cylinder. All three padlocks are manufactured under the Cobra Lock brand by Locking Systems International Inc. and are available direct from LSI or one of our Service Center.

The Universal Puck Padlock has a patent pending design that will allow the user to change the security of the lock as easy as changing the lock cylinder. This padlock was designed to use standard vending lock cylinders such as Abloy, Medeco or Cobra 7 vending lock cylinders. The body is made of solid steel and is hardened for maximum strength and security. The 8100 and 8200 series padlocks come with standard lock cylinders, both are constructed out of solid steel and come with hardened steel shackles. The shackles can be changed by the end user to either our standard one inch or our two inch shackles.

Founded in 1994, Locking Systems International, Inc is a manufacturer and distributor of many different types and styles of locks and locking systems. LSI manufactures the Cobra 7 and the CobraMatic 7 cam locks and vending locks, and is a leading distributor and service center for Abloy and Medeco.
